### **Abstract**

Recent trades and businesses worldwide use data and data science to address various challenges, from credit card fraud detection to image classification. Also, there will be roughly 8 to 10 million job openings in the data science field by 2028, which offers a vast array of opportunities for data science professionals. All learned professionals however, require more than a rock-solid theoretic related to secure a career in data science. Mostly all over businesses are seeking data scientists with practical experience solving data issues and data science tasks that address real-world issues.

A vital step in gaining such experiences is preparing a data and data science tasks and report that offers a detailed overview of the task and solution. But, what does a task report on data science include? What are the steps to prepare such data information? Lets understand what a Data science report on data science means, and then find out the steps that will help you design one!
