

CONCLUSIONS

The conclusion of this research is *L. perpusilla* were able to absorb nitrate by 0.79 mg / L / day and phosphate by 0.37 mg / L / day compared to *L. punctata* which was able to absorb nitrate of 0.71 mg / L / day and phosphate of 0.35 mg / L / day.

Acknowledgment

We would like to thank LIPI Limnology, Science Institute of Indonesia, Cibinong, Bogor for making this research possible
