

career support, and that both parent and peer support were predictive of students' subsequent career exploration. More studies are needed that examine the combined effects of different contexts. Fifth, although the participants in this study stem from a population of diverse socioeconomic backgrounds, they were homogeneous in terms of ethnicity and cultural background (i.e., Eastern German). Consequently, obtained results need to be replicated with culturally diverse samples. First attempts were undertaken by Kracke, Güre, and Dietrich (2008) who tested the scales on parental career-related behaviors in a sample of Turkish students.
