Abstract

Nepal is a geographical continent with great natural diversity and immense resources. Aiming for its development and progress is one thing, achieving it and implementing it for the betterment of the entire country is another. Those who are throwing the life of a nation of nearly a century into the gutter by talking about revolution under the guise of development should first stop confusing the people by gossiping. Socialism and Communists in the world have advocated Communism, but even then Communism is not a friend to the living soul. The middle point of communism is when people stop seeing the world and the place where the dead body is disposed of is the destination of communism. The destination of communism is the where place the rich, the poor, the common people, all the castes, the public, all the others are united. That is the complete communism. The point of origin of any object is Zero and finally it dissolves into Zero. When life progresses from a dormant state, along with life comes the need for all kinds of material that life needs, such as land soil, air, water, heat, and environment. Individuals form groups. The more Artificial Intelligence (AI) creates various devices, the more sustainable development becomes natural resources of mystery. Because the development of AI is destruction. Since AI will provide comfort and convenience to human life and also cause destruction, aren't development and destruction equal.

Key word: Socialism, Natural resources, (AI), Human, Environment, Air, Water, Heat, Energy, Life, Society, land.

Introductions

In my Research of the Socialism and Communism of Human Society . If we look at the movement of people in the world, we seeing that there are different ideas and thought, such as the rich and poor, diferent religions, castes and cultures,and they are all moving in their own caste and creed. All the above mentined issues are sometimes connected by politics. There are mainly two types of Peoples in the world. first is between the rich and poor. Second is religiouns in the world.

The way of life of aquatic animals is to live in water. Some organisms can live in both water and land, while some can live only in land and water. Aquatic All organisms that can live in both land and water have a social and psychological identity. The only difference is that in the way of life of human society, the social and psychological way of life is broad and conscious. According to that society is grazing.

All the countries of the world have some kind of natural resources. From common natural resources to precious resources, the pride of the earth is within nature. Today, the developed countries of the world have succeeded in transforming the country's economy by using these natural resources in a timely manner and have succeeded in making their citizens live happily and happily. Being unable to do so, they have been deprived of development and happiness. The developed countries are going to exploit the natural resources within the country and use them to make their storage empty, while the poor and underdeveloped countries are yet to be mined. In this way, the future of countries that have yet to be mined but have abundant natural resources looks bright and beautiful.

The world people have three type of brain and thoughts. Positive, Negative, Negative positive both. Within this brain, there are many sub-centers from which all the organs of the body are mobilized. Human emotions such as anger, thirst, fear, happiness, laughter, kindness, love, etc., originate from different centers and sub-centers of the same brain. The brain is the central part of knowledge, wisdom, intelligence, thought, etc., which is active every moment. The active state of the brain is called the soul of the animal.

The development of Jiri should be explored from a broad geographical, multi-ethnic, multi-lingual, multi-religious and cultural perspective.From the point of view of natural resources, Jiri is in an area with a lot of potential. Especially in this city area, there is a lot of potential for the following resources.Kiwi cultivation, potato cultivation, tea cultivation, herb cultivation etc. can be produced in wet and fertile soil, while in the forest and pasture areas there are possibilities for animal husbandry, cattle and forest production based industries such as herbs, wood and firewood. Similarly, the electricity generated from Khimti River, Jiri River in the water source is providing enough service to the consumers of this Jiri Municipality, while the river flowing through Jiri has been dammed to construct an artificial lake by D.P.R. It has also been prepared.

It seems that the efforts to be made in order to mobilize the above-mentioned natural resources in a more organized manner should be as follows. For example, local government, state government and central government need to identify needs and resources, public participation, environment creation, investment friendly environment and search for investors and coordination. For example, the local government should coordinate with the provincial government by identifying needs and resources, seeking people's participation, and the provincial and central governments should conduct feasibility studies and resource management to make financial investments for large projects, while the community should start private enterprise businesses and search for businesses.

The social and psychological identity of the majority of life is obtained from the social life style which is influenced by the geography. People living in different continents have different social and psychological conditions. The land on which humans live has a social and psychological impact on human life. Society and psychology are connected with human life. Consciousness cannot exist without objects. The object itself develops consciousness. The development of consciousness has social and psychological effects. Every living being on this earth has its own intelligence and conscience and all of them have a social and psychological way of life. The difference is only that, it is separated only by the physical structure of life and geography.

The way of life of aquatic animals is to live in water. Some organisms can live in both water and land, while some can live only in land and water. Aquatic All organisms that can live in both land and water have a social and psychological identity. The only difference is that in the way of life of human society, the social and psychological way of life is broad and conscious. According to that society is grazing.

Human lives have more desires than other living beings and social and psychological ideas are also more developed. As a result of that, both growth and destruction are taking place day by day during social and psychological development. When growth and development are equal, when social and psychological development is equal, its final point becomes Zero. Nothing was yesterday, is today and will not be tomorrow. Therefore, the place of origin of any thing is zero and its end is also zero.

We are talking about sustainable development and some countries are already starting. As we see, some countries are developed and some countries are under developing. But overall, there is no possibility of sustainable development when growth and destruction are equal. Even if it is done, it will last for a century, after that it will be silent.

The social and psychological issues that affect the majority of people's lives are positive and negative thoughts, which push the social and psychological conditions back and forth. The information system is the most important thing in the way of life of the majority of any country, which has a social and psychological impact. The effect of information on human society is having good or bad psychological effects. If the majority of people living in any society misunderstand the correct information, its effect will be misinterpreted by all the people living in that area because the psychological effect is also of the same type.

Social and psychological influence in life changes according to the speed of time. If we look at yesterday's situation and today's situation, twenty-four hours have already passed. What was twenty years ago cannot be applied today. Social and psychological conditions are changing with the passage of time.

The first step is to accuse the current political forces of being traitors to the country, even when our self-respect has been trampled, and we have to get rid of them. Revolution should not become a delusion and should not become a means of climbing the ladder of power. The revolution is not over. All previous revolutions in the history of the country did not have a clear roadmap of what to do after the revolution. Now there should be a revolution with a roadmap. Political revolution and economic revolution should be connected. Those who fight for power are traitors. Today's alternative is not Congress, UML or Maoists and cannot be. This is because as long as these parties exist, the country will not dream of development. The brokers of Indian expansionism and American imperialism cannot be nationalists.

Propose and Objects of Study

Propose and Objects of the research Study. The Socialism and Communism of Human destination. Mainly this research is the social and psychological impact of majority life will be found out due to the declining population of Nepal. This research article will emphasize that the main factor impacts of depended about the geographical area, natural resources and political environment. All the mentined issues are sometimes connected by politics. There are mainly two types of Peoples in the world. first is between the rich and poor. Second is religiouns in the world.

Hypothesis of the Study

Hypothesis of the research Study. The Socialism and Communism of Human distination In socialist and communist societies, the management and distribution of natural resources are more centralized and geared toward collective welfare, rejlutting in moreequitable access to resources compared to capitalist societies, however, this centralization may also lead to inefficiencies and environmental challeges depending on the level of governmental control and civic participation. Would I like a few alternative hypotheses with slightly defferent focuses, e.g., historical and environmental or economic.

The concept of an "end-of-life destination" is complex and can be understood from different perspectives. In a literal sense, death is the final destination for everyone. However, it's also

possible to view the journey of life, and death, as a journey with various stages and potential "destinations" along the way, as well as a potential "afterlife".

Research question of the study

Why is a Natural Resources Relation With Socialism and Communism of Human Society of Human majority social and psychological identities of the multiverse Life?

How can improvement the Natural Resources Relation With Socialism and Communism of Human Society?

Limitations of research study

Socials, psychological and geographical deference multiverse life activities of our society. Natural Resources Relation With Socialism and Communism, Politice and distination of life.

Literature Review

Thematically Review

Socialism and Communism of Human Society. Human lives have more desires than other living beings and social and psychological ideas are also more developed. As a result of that, both growth and destruction are taking place day by day during social and psychological development. When growth and development are equal, when social and psychological development is equal, its final point becomes Zero. Nothing was yesterday, is today and will not be tomorrow. Therefore, the place of origin of any thing is zero and its end is also zero.

We are talking about sustainable development and some countries are already starting. As we see, some countries are developing and some countries are developing. But overall, there is no possibility of sustainable development when growth and destruction are equal. Even if it is done, it will last for a century, after that it will be silent.

The natural resources will be the base for future development plans for sustainable development and economic growth. Despite the availability of resources within the country, some powerful political leaders and high level bureaucrats are negligent and are in trust of others' supports rather than on their own.

According to Justin, People generally use "human nature" as an argument stopper, as if they knew the nature of the most complicated entity in the world, and knew it without any actual study based in science, just by being an entity of that sort. No one would claim to know about human biology and physiology just because they have a human body. But human biology and physiology are simple and easy compared to human behavior, and far, far better known. (Justin Schwartz

According to Steve, all individuals are unique. And like it or not we are narcissist who truly only care about us. That's unavoidable and inherent, as the unit must survive at all cost. The collective may sound attractive to the youngsters oh, but it is against human nature. In life you are the only one responsible for you. And no one else really gives a damn. That's a cold hard fact but it's true. This is outside of your parents who do care. But the reality of that is some don't care. (Steven Cooper, 1998–2020)

Since Nepal is an agricultural country, there is a lot of vacant land in Nepal and the air and water conditions are suitable for the cultivation of cash crop kiwi fruit. I have linked the study to fruit cultivation. Since the kiwi fruit plant bears fruit up to the age of 60 after planting once, it is considered a sustainable development of economic earnings for kiwi fruit farmers.

According to David King, the whole “*Human nature*” argument boils down to the current system of society. Some people seem to perceive it as “natural” to work under capitalism because that's what we have right now. Hundreds of years ago, monarchies and the divine right of kings WAS ‘human nature.’ It was as natural to have lords, ladies, kings, and queens as it was pious to be diseased and impoverished. The average person who lived under feudalism would have considered their societal structure as ‘natural’.(David King)

Theoretical review

Socialism and Communism of Human Society. The social and psychological issues that affect the majority of people's lives are positive and negative thoughts, which push the social and psychological conditions back and forth. The information system is the most important thing in the way of life of the majority of any country, which has a social and psychological impact. The effect of information on human society is having good or bad psychological effects. If the majority of people living in any society misunderstand the correct information, its effect will be misinterpreted by all the people living in that area because the psychological effect is also of the same type.

Every living being on this earth has its own intelligence and conscience and all of them have a social and psychological way of life. The difference is only that, it is separated only by the physical structure of life and geography. The way of life of aquatic animals is to live in water. Some organisms can live in both water and land, while some can live only in land and water. Aquatic All organisms that can live in both land and water have a social and psychological identity. After a society is dead, truth is not found, especially in a society that has been destroyed. The destination of communism is the place where the dead body of person disposed of the place.(view of researcher, 2025)

According to James Oppenheimer-Crawford, if we can say that socialism goes against human nature. I rather suspect that socialism is an outgrowth of the mature human spirit. The less evolved human spirit is attracted to things we might equate with capitalism: all of the ideas involving grasping something desired away from someone else simply because one has the strength to do so. There is an assumption out there that all humans tend toward selfishness, and I think that's nonsense. Of course

one sees this in the unenlightened and fearful. However, it has no place in a society where there is enough. I believe that we can all learn to use common sense and restraint in our daily activities.(James Oppenheimer).

According to the Tim McClennen, The human nature theory of capitalism suggests that humans always respond to incentives. That is, that they do what brings the most material advantage to themselves. Thus, the capitalist advocates a system wherein incentives encourage people to produce what is most needed by others. They propose that an unhindered free market, ensured by government protection of property rights, will create such incentives. (Tim McClennen)

Empirical review

Socialism and Communism of Human Society .Social and psychological influence in life changes according to the speed of time. If we look at yesterday's situation and today's situation, twenty-four hours have already passed. What was twenty years ago cannot be applied today. Social and psychological conditions are changing with the passage of time.

Nepal is a country rich in natural resources. There are natural resources in Nepal such as rivers and streams, forests and herbs, fertile soil, vacant land and mining resources. There are various challenges to utilize the above mentioned natural resources potentials which is the main reason of politics in Nepal.

According to David King, the whole “*Human nature*” argument boils down to the current system of society. Some people seem to perceive it as “natural” to work under capitalism because that's what we have right now. Hundreds of years ago, monarchies and the divine right of kings WAS ‘human nature.’ It was as natural to have lords, ladies, kings, and queens as it was pious to be diseased and impoverished. The average person who lived under feudalism would have considered their societal structure as ‘natural’.(David King)

According to the Zhenli, the argument regarding “human nature” is supposedly that because humans are greedy, they’d prefer capitalism, a system where a tiny minority own most everything while the average person own very little. You would think “greedy” people would want to, I don’t know, *own* stuff right? So why is supposedly the system where the average person owns very little and gets very little, if any, political power, supposedly the best system possible for human greed?(Zhenli)

Social and psychological factors in the various aspects of life

Mainly, the geographical environment has a social and psychological impact on the diversity of life. There are countries in different regions on this earth. These countries have their own diversity. Which makes the society and psychological concepts different. For example, the government movement, laws and regulations that run the government of America are different from the laws that run the government of other countries. The physical structure of a person, language, culture, dress and lifestyle and psychological conditions are different. For example, if we compare the continents of Europe, America, Africa and Asia with Nepal, there are differences in various

diversity. This society is run by three types of thinking. Positive, negative and positive and negative.

The social and psychological diversity of life begins with zero and society is built. Whether a society progresses in a good or bad direction depends on the governance system of that country.

To give identity to society, you must first be able to know yourself. You often have to look in the mirror to distinguish between what your face looks like and what you are. If you can see what your face looks like within a minute, you know the world.

Building social life

Society begins with one to two, and two to three households, and then society is built through the synthesis of villages and neighborhoods. Just as society is built one by one, so too does the gradual decline continue. Society is constantly growing and declining.

Destination and communism

Communism is praised in the social and psychological diversity of life. There is a struggle to run the government. There is talk of providing good services and facilities to the society, but what do the leaders and rulers who praise communism know about its destination?

Everybody says, "My land is this much, my wealth is this much, I am this and that, look, you will see, I am a big caste, I am a leader, I am a king, I am the greatest, but..... no one has seen where communism is. Communism is that place where all the above types of social systems can exist on just 6 feet of land, a place where death and cremation can take place.

Body soil

The bodies of all living beings, including humans, are made of soil, and then soil itself. The fuel that runs a lump of soil is water and heat. Just like a train runs on water and coal. Life was not there yesterday, it is there today, it is running in the present, it will not be there in the future, just like I was not there yesterday, I am here today, I will not be there tomorrow. Yesterday I was zero kg, today I am 75 kg, tomorrow I will turn into a zero kg. That is why heaven and hell are within our lives. After we die, we turn into ashes or soil.

Sustainable development

The more Artificial Intelligence (AI) creates various devices, the more sustainable development becomes a mystery. Because the development of AI is destruction. Since AI will provide comfort and convenience to human life and also cause destruction, aren't development and destruction equal?

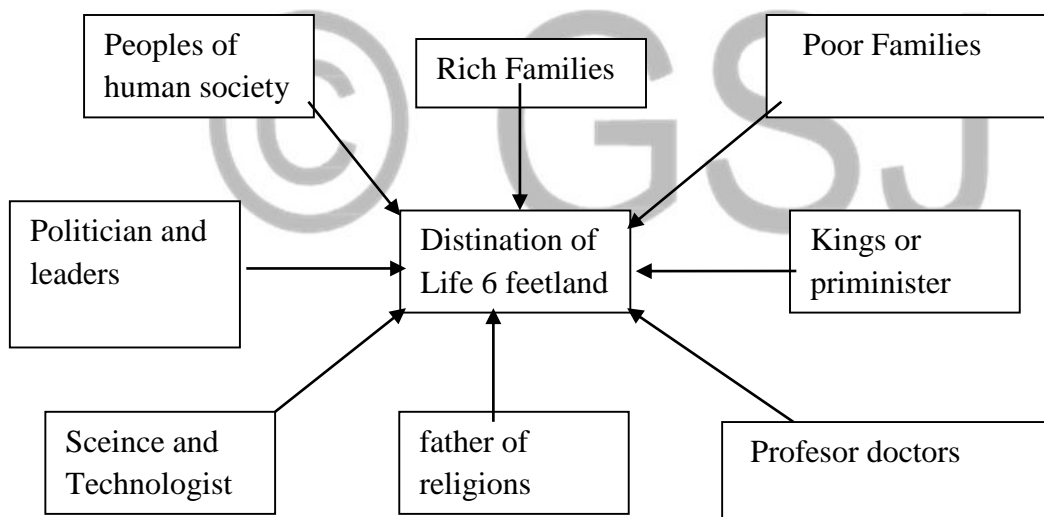

The body of an animal is made up of many different types of cells. Cells are living cells. At every moment, there is a continuous process of development and destruction of living cells in the body. By the combination of earth, water and air elements, living cells are closed, i.e. they are born and the process of dying continues

Re-srarch study of Conceptual of HumanActivities

After a society is dead, truth is not found, especially in a society that has been destroyed. The destination of communism is the place where the dead body of person is disposed of the place. Therefore, sin and religion are a matter of individual's thoughts and behavior. Self-satisfaction is obtained through efficient actions, easy living is possible. Even if there is happiness for a few moments due to unskilful actions, the future results will be very sad. When a person is clean, selfless, fearless, calm and restrained, then he gets the feeling of joy, he sees and enjoys heaven. Therefore, heaven and hell are seen and experienced during life, not after death.

Human life is very important. It is possible for people to make this life worthwhile in their lifetime. The modern world has been built by human ability. There have been many miraculous discoveries. People have made their fame immortal even after death by doing good deeds. Even though the body and soul of a person is gone, he has made his name Azar Amar with the remarkable contribution he made during his lifetime. It is said, work, earn a name.

formwork of Human Activities Distination

Research Methodology

Natural Resources Relation With Socialism an Communism of Human Society Social and Psychological Identities of Multiverse Life .In this chapter, the method adopted in connection with the qualitative explained. The report has been prepared on the basis of research based on various reference materials and the experience gained from direct observation or visiting areas and internet website. The role of the researcher has been fully encouraged to present ideas and viewpoints from entrepreneurs such as individual, collective and different area such as geographical and human societal area of majority and social and psychological identities of The Multiverse Life. In this chapter, the title of the research, justification and analysis qualitative and

explanatory my research. I will be using qualitative research as it is especially important in the utilization of human, psychological, multiverse social life and natural resources to sustainable development of society.

Method Of Research Study Data Collection

Primary data collection: Primary data collection from the field study and questionnaire study of field area. Inform key person.

Secondary data Collection: Secondary data collection from vital registered, Government official, INGO and NGO visit.

Explanatory Research Analysis

Human life is very important. It is possible for people to make this life worthwhile in their lifetime. The modern world has been built by human ability. There have been many miraculous discoveries. People have made their fame immortal even after death by doing good deeds. Even though the body and soul of a person is gone, he has made his name good with the remarkable contribution he made during his lifetime. It is said, work, earn a name.

Research Analysis of the study

Natural Resources Relation With Socialism and Communism of Human Society Social and Psychological Identities of Multiverse Life. In this chapter, the method adopted in connection with the qualitative explained. After a society is dead, truth is not found, especially in a society that has been destroyed. The destination of communism is the place where the dead body of person disposed of the place. The more Artificial Intelligence (AI) creates various devices, the more sustainable development becomes a mystery. Because the development of AI is destruction. Since AI will provide comfort and convenience to human life and also cause destruction, aren't development and destruction equal? The bodies of all living beings, including humans, are made of soil, and then soil itself. The fuel that runs a lump of soil is water and heat. Just like a train runs on water and coal. Communism is praised in the social and psychological diversity of life. There is a struggle to run the government. There is talk of providing good services and facilities to the society, but what do the leaders and rulers who praise communism know about its destination? Every living being on this earth has its own intelligence and conscience and all of them have a social and psychological way of life. The difference is only that, it is separated only by the physical structure of life and geography.

Conclusion

My research study found the reason, first requirement in the country is the end of the current status a people's revolution with a clear roadmap for the all-round development of the country is the first condition. Defense of the country's borders Adopting the path of development based on its own

culture, geography and social characteristics. Abandonment of dependent and subservient culture towards a country. Religious, cultural which are hypocritical radical reforms in favor of country interest and public interest. The highest development of national sentiment in the people.

The bodies of all living beings, including humans, are made of soil, and then soil itself. The fuel that runs a lump of soil is water and heat. Just like a train runs on water and coal. Life was not there yesterday, it is there today, it is running in the present. After a society is dead, truth is not found, especially in a society that has been destroyed. The destination of communism is the place where the dead body of person is disposed of the place.

Communists in the world have advocated Communism, but even then Communism is not a friend to the living soul. The middle point of communism and communism is when people stop seeing the world and the place where the dead body is disposed of is the destination of communism. The destination of communism is the place where the rich, the poor, the common people, all the castes, the public, all the others are united. That is the complete communism.

Sustainable development requires economic, intellectual and labor power. In order to become economically prosperous, the economy can be strengthened and sustainable development can be achieved only if the various natural resources on this earth can be used, processed and converted into cash. Our country Nepal is extremely rich in natural resources. For example: Although there are water sources, plants, various minerals including uranium and iron metals and precious stones, the state has not been able to fully utilize them. If the natural resources within the country are used, then our country would be the richest country in the world.

The main reason why our country's natural resources are not used and the economy is weak is the weak mentality, corruption, and the exodus of young and intellectual manpower in Nepal's politics. If the politics of Nepal would be stable and the youth and intellectual manpower would be prevented from migrating abroad and policies and rules would be prepared to use the natural resources in the country and a good development plan would be made, the economy of the state would be strong. Findings. $IVS = MVS \times FVS$ -: TLV . $FVS = IVS \times MVS$ -: $TLVS$. $MVS = TLVS$ -: $2(1 + FVS - IVS)$. $TLVS = 2MVS + FVS - IVS$ (Source: Studiers, 2025).
