

2.4.3 SMS Slides Processing Interface

This interface will allow selection of course code, typing or pasting slides text, load list of registered students from excel sheet given by administrative and sending SMS to students. Sending panel is divided into five independent parts. Each part will represent single SMS therefore it will have 157 characters.

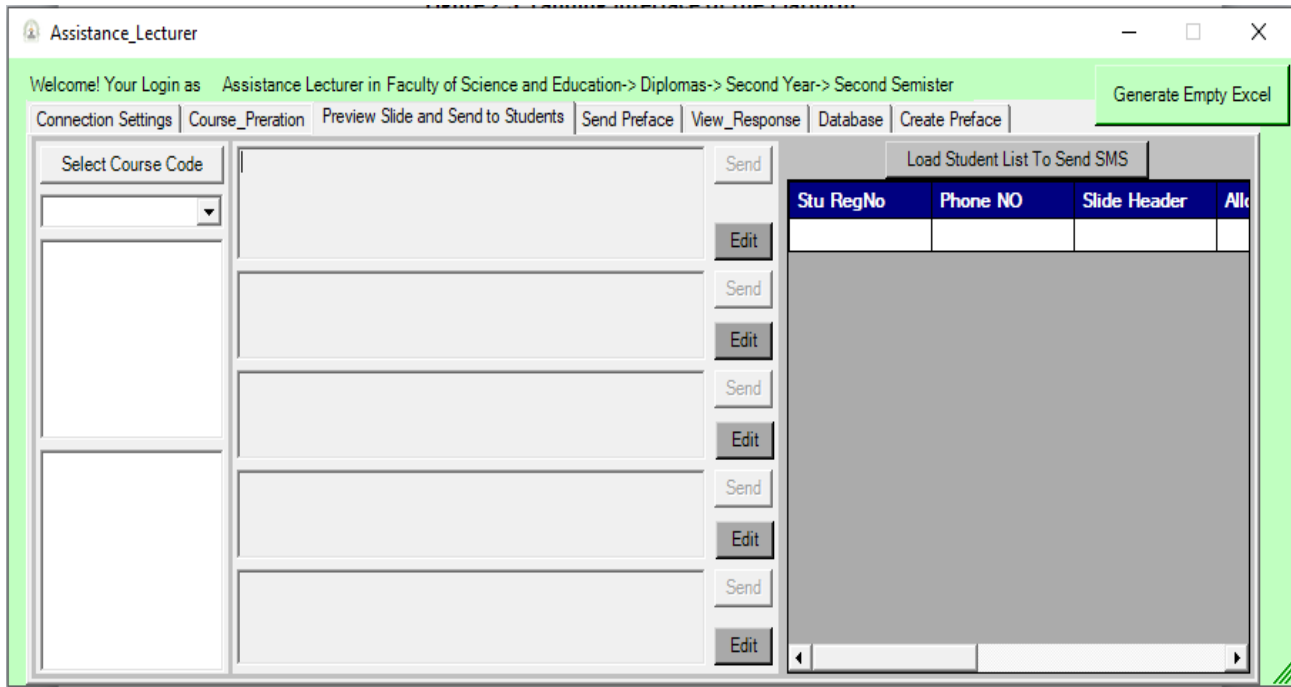

Figure 2.5: SMS Slides Processing Interface

2.4.4 Students Resposes Interface

In this interface lecturer can view questions asked by students and responding in personal or to all students.

Figure 2.6 Students Resposes Interface

3. CONCLUSION AND FUTURE WORK

This paper gives the blue print of how SMSs can be used to enhance distance learning in developing countries. It provides requirements analysis, data flow and expected interfaces. The future work of the study is to develop and implement the platform prototype. The prototype will be used to see the community acceptances of the platform.

4. ACKNOWLEDGMENTS

Authors hereby express the gratitude to Vijana Lab Co. ltd and University of Iringa.
