

issues related to STDs represent still a low rate of 1.92% but this may be accredited to the fact that there's a high population that didn't proceed to voluntary tests. The above given issues affect negatively the community social welfare and many of which, have direct effects on the biodiversity welfare. This is how for some protected areas we don't have buffer zones as they were squatted. Also, lack of land can force a community to invade someone's farm looking for food (rooting).

Issues that can affect social community welfare include Extreme poverty (lack access to land, food, hygiene and sanitation, education). The possible solutions for prompting the public health the HMP are to support working together through cooperatives for example, support the social, integration programs, promote their cooperatives and development of off-farm and vocational, sanitation knowledge. The actions that require immediate intervention are the education of the youth to reduce the jobless rate, initiation of Public health campaigns. Initiation of appropriate mobilization campaigns facilitate or promote interaction population between such as form joint cooperatives).

The mobility and instability affecting Batwa or indigenous peoples could have particular relevance to their health. The social, alienation from families and society, and incarceration are all health issues that predominantly affect health of HMP. Indigenous people have disproportionately high rates of incarceration; this is common to developed nations, and possibly a worldwide occurrence. The prevalent rates of exposure to potentially psychological problems were high (5.77%) indicating increasing frequencies of sexual violence (1.28%), the

indigenous women have been mainly demoted by colonization and discrimination in the communities surrounding the VNP of Rwanda. There were a few limitations in the current study the authors would like to address. The study was limited to issues pertaining community living conditions of vulnerable and poor people surrounding the protected areas in order to have an insight of their socio-economic and development conditions in a bid to foster a sustainable conservation of the Volcanoes National Park.

CONCLUSION

On the demography situation in the families and welfare conditions in the HMP, there was a need to develop social mobilization programs to enable these communities acquire enough knowledge on the demographic threats in the area. On the Socio-economic and development facilities accessibility, there was the need to develop micro and income generating projects to potentially increase the knowledge and economic self-reliance, enough for these communities to become responsible of their fate. Specific and urgent actions are needed to help lift the population from the chronic poor life. Specifically, we find in this group a large number of people who are traditional forest-dwelling but whose ways of living had to abruptly change following the creation of the national park in Rwanda. This population was left at their own in poverty of all type and stigma. Despite, the positive actions from the Government of Rwanda and its partners in development including the park management, For long, vulnerability living conditions of people living in the vicinity of the VNP has always been linked to the vulnerability of this park hence the necessity of conciliating approaches such as park-people

partnership. This study goes further to recommend that comprehensive approaches and provide the basic needs to these people ensure on a regular basis that the beneficiaries are attending schools and be developed and that existing ones be adapted to embrace this new paradigm.

Acknowledgements

We would like to thank the government of Rwanda, local leaders, for giving us the strengths and wisdom to put this piece of work into a meaningful publication. We would like to acknowledge the tireless work of our volunteers and the field partners' contribution including Alphonsine Mukanyindo and Jean Pierre Mupenzi, respectively the President and Secretary of the Federation of Traditional Hunters in VNP. Our sincere thanks also go to Mrs. Dolores P. Martinez for her important contribution in the design of the questionnaire. Finally, we would like to thank everybody whose direct and indirect support has kept us in our personality that made this work possible.
