approach to dealing with unemployment will change. You can also disaggregate for age, class, educational level, etc.

### **Extrapolate**

This means to take some proven facts and to make a prediction based on them. You could take the track record of Pirates and Chiefs and make a prediction that they will end up in the top half of the results table next year. This is extrapolation.

### **Hypothesis**

This is a prediction of what the outcome of the research may be.

### **References and further reading**
